Annual turnover

1,400,000 €

Export (% on total turnover)

35%

Activity

Alfa Stampi is specialized in design and manufacturing of moulds for the production of rubber articles for several industrial requirements. For over 30 years the company has been dedicating exclusively to this specific field, developing and continually investing in technology and staff training. Recently Alfa Stampi has extended its know-how to moulds for plastic articles, working in close collaboration with its customers. It is a qualified supplier for a lot of Italian and foreign companies, certified according to the European standards ISO 9001:2008. Among its services, the company runs directly, in-house or in collaboration with trusted partners: mould testing, sampling, chrome plating, hardening, engraving by stamp or laser and rapid prototyping.

Products

Alfa Stampi's moulds are used for the production of a wide range of technical rubber articles, from the traditional o-rings, membranes, fairleads, frames, bellows, suction cups, washers, grommets, valves, bushings, sleeves, rubber-metal items to more complex parts – for different moulding solutions like injection, compression, injection-compression, transfer and capillary.

The company produces moulds in square or round shape, up to an operating field of 1,600 x 700 mm and in different types of steel: from the most common C45 1.1730 to harder materials such as 1.2311 and 1.2312 or special steels like 1.2343 (also hardened HRC 48/50).

Whether the requirements are for prototype, low volume or high-cavity serial moulds, the firm can cater for any needs.
